                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                           RNA from cytolytic T cell clone T4T8C1, which expresses high levels of TIA-1 antigen was used for the construction of a cDNA library in lambda gtil. When this expression library was screened using TIA-1 monoclonal antibody, several bacteriophage expressing immunoreactive fusion proteins were identified. Cross hybridisation analysis claentified three independent clones contg. related cDNAs. The largest cDNA insert was used to probe the original library for isolation of full length cDNAs. When this same probe was used to screen a second lambda gtil library prepd. from PHA-activated T cells, a 2.2 kb insert cDNA was isolated, clone 269.4, which encodes rp40-TIA-1, a 40 kD TIA-1 antigen. A segment of the cDNA is useful as a probe for determining the presence of cytolytic lymphocytes in a biological sample. This ability provides an early warning of the cDNA is useful considered to the constant of the cDNA is useful as a probe for determining the presence of cytolytic lymphocytes in a constant of the cDNA is useful as a probe for determining the presence of cytolytic lymphocytes in a cytoly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                              CC present invention describes M. jannaschil open reading frames from the comme sequence. The invention also describes a computer based system comme sequence. The invention also describes a computer based system components of the M. jannaschil genome that are components of the M. jannaschil genome that are components of the m. jannaschil genome that are components of the modelogous to target nucleotide sequences, comprising: (a) data storage means comprising the nucleotide sequence of the 164976, 58407 or 16550 componence at least 99.98 identical to it; (b) search means for comparing a componence at least 99.98 identical to it; (b) search means for obtaining components sequence to the nucleotide sequence of the data storage means to component in the means for obtaining components of identify a homologous sequence, and (c) retrieval means for obtaining components of the homologous sequence. The method, which is based on whole genome components of an autotrophic archaeon M. jannaschil, the genome components of the 164976 bp sequence given in AAV21209), and controlled the components of the 164976 bp sequence given in AAV21210), and controlled the components of the sequence given in AAV21210), and controlled the components of the components of the sequence given in AAV21210), and controlled the components of the sequence given in AAV21210), and controlled the components of the sequence given in AAV21210), and controlled the components of the sequence given in AAV21210), and controlled the components of the sequence given in AAV21210), and controlled the components of the sequence given in AAV21210), and controlled the sequence given in AAV21210).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to isolated and purified cDNA encoding a human hydrolase-like molecule (HHLM), designated HHLM-1 to HHLM-8. The HHLM DNAs and polypeptides are useful for diagnosing, treating or preventing cell proliferation disorders and autoimmune disorders. Cell proliferation disorders and autoimmune disorders include AIDS (acquired immune deficiency syndrome). The present sequence

New polynucleotides that increase gene expression in plants used produce transgenic plants with resistance to plant pathogens  $\boldsymbol{\cdot}$ ៥

The present sequence is potato alpha-amylase promoter sequence. This shows strong similarity to an alpha-amylase promoter of tomato. The manipulation of amylase levels is done by introducing isolated phenotype modulating genetic sequence which increases or stabilizes expression of a second nucleotide sequence inserted proximally. GenomeWalker (14) is used to clone tomato DNA sequences flanking the Ds element in UQ406. The Ds sequence inserts into the promoter region. This is used in transposon tagging of alpha-amylase gene to identify mutants exhibiting altered physiological properties. Transgenic plants having altered phenotypic traits, such as resistance to plant pathogens, senescence timing, starch metabolism, cell growth, expansion and/or division, and the shape of cells, tissues or organs can be produced.

                                                                                                                                                                                                                        This sequence represents the Solanum tuberosum alpha-amylase 1 promoter. CC Alpha-amylase is one of the key plant enzymes, and participates in the CC pathway responsible for the breakdown of starch to reducing sugars in CC potato tubers. Alpha-amylase is encoded by a gene family consisting of CC at least five individual genes divided into two sub families (the type 1 cand type 3 alpha amylases). Type 1 alpha-amylases are expressed in CC sprout and stem tissues, but not in tubers, roots or leaves. The type 3 alpha amylases are expressed in tubers, sprouts and stem tissues. The CC promoter is used to direct expression of a gene of interest in stem CC calls, tissues or organs of a dicotyledonous plant (such as a potato). This sequence can be used in constructs, such as vectors (such as those CC derived from agrobacterium), for transforming cells to express a gene of interest. The gene of interest that is fused to this promoter sequence CC may be a crop protein gene with an optimised amno acid composition, so CC as to increase the nutritive value of the crop. It is also possible to use this promoter to express non-plant genes for mammalian products, such as interferons, insulin, blood factors, and plasminogen activators.

This cDNA sequence encodes a human tata-binding protein associated factor, hTAFII105, isolated from Daudi cell nuclear extracts. Tightly associated subunits (TAF's) are components of the transcription factor TFIID and are thought to mediate transcriptional activation. This encoded protein may be produced recombinantly from transformed host cells or purified from human cells. hTAFII105 specific binding agents such as specific antibodies could be used for diagnosis (e.g. genetic hybridisation screens for hTAFII105 transcripts), therapy (e.g. gene therapy to modulate hTAFII105 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating B cell specific activators or other transcriptional regulators).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This DNA encodes a polypeptide comprising a (modified) fragment (I) of a TATA box-binding protein associated factor II 105 (TAFII105). A pharmaceutical composition comprising (I) or the polynucleotide or an inhibitor or antagonist of (I) is useful for treating cancers and inducing apoptosis in pathological cells. The composition is also useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a gene encoding human latent transforming growth CC factor (TGF)-beta binding protein 3 (hirBp-3). The gene was obtained by CC reverse transcriptase PCR of mRNA isolated from hirBp-3 expressing CC tissues e.g. cartilage, bone, brain, kidney, ovary, pancreas, stomach CC and spleen. The protein is often co-expressed with TGF-beta and functions CC as its inhibitor. hirBp-3 is useful for inhibiting or stimulating tissue CC growth in vitro or in vivo and for inhibiting tunour growth. The hirBp-3, CC or its homologues, and antisense nucleic acid sequences can be used to CC regulate TGF-beta activity, especially plasminogen activator inhibitor-1 CC expression, activity or secretion, thrombomodulin expression or CC cativity, TGF-beta secretion and cellular proliferation. Modulation of CC hirBp-3 is useful for prevention and/or treatment of diseases arising CC form cellular effects induced by TGF-beta, especially cancer, fibrosis, CC osteoporosis, myocardial infarction, congestive heart failure, dilated CC cardiomyopathy, deep venous thrombosis, disseminated intravascular CC thrombosis, stroke, sepsis, injuries involving major tissue damage and CC trauma, systemic inflammatory response syndrome, sepsis syndrome, cc plaque rupture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human latent transforming growth factor (TGF)-beta binding protein 3, nucleic acids and vectors useful as modulators of TGF-beta, for inhibiting tissue or tumor growth, and treating e.g. osteoporosis and myocardial infarction -

                                                                                                                                                                                                                                                                                                                                                                                                                   activity, TGF-beta secretion and cellular proliferation. Modulation of hITBP-3 is useful for prevention and/or treatment of diseases arising from cellular effects induced by TGF-beta, especially cancer, fibrosis, osteoporosis, myocardial infarction, congestive heart failure, dilated cardiomyopathy, deep venous thrombosis, disseminated intravascular thrombosis, stroke, sepsis, injuriosis, disseminated intravascular thrombosis, stroke, sepsis, injuriosis proliving major tissue damage and trauma, systemic inflammatory response syndrome, sepsis syndrome, sepsis syndrome, multiple organ dysfunction syndrome, and atherosclerotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a gene encoding human latent transforming growth factor (TGF)-beta binding protein 3 (hLTBP-3). The gene was obtained by reverse transcriptase PCR of mRNA isolated from hLTBP-3 expressing tissues e.g. cartilage, bone, brain, kidney, ovary, pancreas, stomach and spleen. The protein is often co-expressed with TGF-beta and functions as its inhibitor. hLTBP-3 is useful for inhibiting or stimulating tissue growth in vitro or in vivo and for inhibiting tumour growth. The hLTBP-3 or its homologues, and antisense nucleic acid sequences can be used to regulate TGF-beta activity, especially plasminogen activator inhibitor-1 expression, activity or secretion, thrombomodulin expression or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TGF-beta inhibitor; proliferative; anti-proliferative; cytostatic; cardiant; anti-inflammatory; cerebroprotective; immunosuppressive; thrombolytic; osteopathic; vulnerary; tranquilizer; antibacterial; PAI-1; plasminogen activator inhibitor-1; thrombomodulin; tissue growth; tumour; prevention; treatment; cancer; fibrosis; dilated cardiomyopathy; injury; osteoporosis; myocardial infarction; congestive heart failure; sepsis; thrombosis; stroke; systemic inflammatory response syndrome; septic shock; sepsis syndrome; multiple organ dysfunction syndrome; septic shock; sepsis syndrome; multiple organ dysfunction syndrome;

```
A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAXI2938 to AAXI3919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in a animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 1284-1294; 2084pp; English

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org.The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWDA2 (gil4732114[gb]AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp. the same strain used for the BDGP's pland EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BF208312 333 bp mRNA EST vo-ruy-4000 601871448F1 NIH_MGC_53 Homo sapiens cDNA clone IMAGE:4092539 5',

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-92, >BCl_MM#scRNA 343-589, >RMER16#LTR
Seq primer: M13 FOrward

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note-"vector: pBluescript II XR; Site_1: ECORI; Site_2: XhOI; This cDNA library was constructed from mRNA isolated from vegatable buds of field grown plants. The cDNA library was prepared using the Stratagene pBluescript II XR library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a XhOI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhOI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhOI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into XLIO-Gold host cells. This library was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwp42 (gil4732114|gblAF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     86
